

Assignment 1: HTML
CSCI 1170
Part 2:

<https://thomasbosc.com/>

This first website is clean and not super dramatic, but also utilises some cool transitions and visuals that make the website very appealing. It uses a monochromatic colour scheme, which makes the website have a much more professional feel. I also love the feature that as the user scrolls the website changes, images move, text fades out, transitions occur.

This website is a drastic shift from the previous but also has some very different goals. It uses the style of an old browser or computer and makes a very unique looking website. In this case I think the creator is looking to stand out more rather than keeping the webpage 100% professional. The main feature that I took away from this one is the fact that you navigate the website as if it is a desktop of a computer, you access different pages by clicking on the desktop icons.

<https://kylecraven.design/>

Similar to the first, this website is clean and concise. As it is the professional website of a web designer the main focus is not on his website but the other websites he has worked on. At the bottom of the page he has examples of his design styles and when the user hovers over them the transitions to an image of his previous work. I think out of the three this is the most practical as it is straight to the point and clear what the goal of the site is.
