C.R.A.P Design Review - CSCI 1170 Assignment 2

Contrast
While I do think I could have been more creative in terms of colour choices, the simplicity and neatness of simple white, black, and grey is not too offensive and in your face but also makes the text very visible to the reader.

Repetition
I tried to keep the design of each page as similar to one another as possible so that there was a sense of consistency between each page. I utilised the same colours on each page and avoided any drastic differences between each page.

Alignment
On the first page all of the text is centre aligned as it makes the text feel more like a title page, however on every other page the text is left aligned. For more significant portions of text, left align makes text much easier to read and looks more presentable. All Images and videos are centre aligned as it looks much cleaner and results in less clutter.

Proximity
I utilised line breaks quite frequently within my code as to create separation between elements, which is a simple solution but seemed to work in most cases. On the last page however as it is strictly images I decided to leave them as is as it created a sort of collage effect.
